

Premanufacture Notices (PMNs) and Significant New Use Notices (SNUNs) Table
May 04, 2023

Case Number	Received Date	Interim Status	Scoping or Focus Meeting Date	Final Disposition	Effective Date	SNUR Effective Date
P-17-0328	06/08/2017	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health	06/29/2017	Section 5(e) Consent Order as recommended	07/06/2018	02/03/2020
P-17-0327	06/08/2017	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health	06/26/2017	Section 5(e) Consent Order as recommended	10/18/2017	01/24/2020
P-17-0326	06/08/2017	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health and to the environment	06/29/2017	Section 5(e) Consent Order as recommended	09/01/2017	12/16/2019
P-17-0323	06/05/2017	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health	06/29/2017	Section 5(e) Consent Order - May present an unreasonable risk of injury to health and to the environment	09/26/2017	12/16/2019
P-17-0317	05/24/2017	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health and to the environment	07/03/2017	<p>'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination.</p> <p>*In EPA's original screening analysis for this PMN in 2017, EPA identified potential for risk to workers and the environment under foreseeable conditions of use, which resulted in the interim finding. EPA subsequently determined that there are no reasonably foreseen conditions of use for the new chemical substances and the PMN submitter provided additional information that changed the environmental hazard profile of the new chemical substance. EPA's final determination that the new chemical substances are not likely to present unreasonable risk is based on EPA's revised hazard and risk assessment for the chemical substances under the intended conditions of use, where EPA expects that employers will require and workers will use appropriate personal protective equipment in a manner adequate to protect them, and no unreasonable risk to the environment was identified. View the determination document.</p>	07/31/2019	
P-17-0316	05/24/2017	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health and to the environment	07/03/2017	<p>'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination.</p> <p>*In EPA's original screening analysis for this PMN in 2017, EPA identified potential for risk to workers and the environment under foreseeable conditions of use, which resulted in the interim finding. P-17-0245	02/28/2017	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health and to the environment	03/20/2017	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination *In EPA's original screening analysis for this PMN in 2017, EPA identified potential risk to workers and the general population and that the substance may degrade to a persistent, bioaccumulative, and toxic chemical, which resulted in the interim finding. The submitter provided additional information indicating there will be no releases to water and that disposal of wastes will be by RCRA-certified hazardous waste incineration. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's risk assessment for the chemical substance under the intended conditions of use described in the PMN and EPA's issuance of a proposed SNUR to address certain reasonably foreseen uses. Conditions of use that fall under the restrictions of the proposed SNUR are not likely to present unreasonable risk of injury to health or the environment because (1) those conditions of use are not likely to be commenced during the pendency of the proposed SNUR and (2) upon finalization of the SNUR those conditions of use would be prohibited unless and until EPA makes an affirmative determination that the significant new use is not likely to present an unreasonable risk or takes appropriate action under section 5(e) or 5(f). P-17-0220	01/25/2017	Recommended section 5(e) Consent Order - Insufficient information available to permit a reasoned evaluation of the health effects and may present an unreasonable risk of injury to the environment	03/09/2017	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination* *In EPA's original screening analysis for this PMN in 2017, EPA identified potential for risk for lung effects from cationic binding and potential for risk to the environment, which resulted in the interim finding. The PMN submitter clarified the processes used for equipment cleaning and handling of wastes and provided processing information indicating that although there may be potential for worker inhalation exposure, cationic binding will not occur because of interaction of the new chemical substance with another substance in the formulation. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's risk assessment for the chemical substance under the intended conditions of use described in the PMN where estimated surface water concentrations indicate unreasonable risk to the environment is not likely and lung effects are not likely. 		Insufficient information available to permit a reasoned evaluation of the health effects and may present an unreasonable risk of injury to the environment		*In EPA's original screening analysis for this PMN in 2017, EPA determined that there was insufficient information to evaluate human health risks and identified potential risks to the environment, which resulted in the interim finding. The PMN submitter subsequently provided human health effects study data. EPA revised the risk assessment and determined that release and exposure patterns from reasonably foreseen uses would not differ from the intended conditions of use. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's revised risk assessment for the chemical substance under the intended conditions of use, where EPA expects that employers will require and workers will use appropriate personal protective equipment in a manner adequate to protect them and no environmental risk is expected. 		present an unreasonable risk of injury to health				
P-17-0118	11/17/2016	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health	12/19/2016	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination	07/26/2017	
P-17-0117	11/17/2016	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health	12/19/2016	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination	07/26/2017	
P-17-0116	11/23/2016	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health	12/29/2016	Section 5(e) Consent Order as recommended	09/06/2017	10/21/2019
P-17-0115	11/16/2016	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health and to the environment	12/22/2016	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination* *In EPA's original screening analysis for this PMN in 2017, EPA identified chronic environmental risk and human health concerns for risks to workers and the general population, which resulted in the interim finding. Based on chronic ecotoxicity and human health testing data provided by the submitter, EPA revised its hazard and risk assessment. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's revised hazard and risk assessment for the chemical substance under the intended conditions of use, where EPA expects that employers will require and workers will use appropriate personal protective equipment in a manner adequate to protect them, and no unreasonable risk to the environment was identified. View the determination document.	08/26/2020

P-17-0109	11/23/2016	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health and to the environment	01/05/2017	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination.* *In EPA's original screening analysis for this PMN in 2017, EPA identified risks to workers and the general population under the intended conditions of use and potential environmental risk under reasonably foreseen conditions of use, which resulted in the interim finding. Based on additional information provided by the submitter, EPA revised its assessment for the intended conditions of use. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's revised risk assessment for the chemical substance under the intended conditions of use, where EPA expects that employers will require and workers will use appropriate personal protective equipment in a manner adequate to protect them, and EPA's issuance of a proposed SNUR to address certain reasonably foreseen uses. View the determination document and the terms of the SNUR.	09/30/2019	10/21/2019
P-17-0108	11/09/2016	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health and to the environment and exposure-based	12/15/2016	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination* *In EPA's original screening analysis for this PMN in 2016, EPA identified potential risk to workers, substantial releases and significant exposure, and risk to the environment, which resulted in the interim finding. The PMN submitter clarified that the new chemical substance would not be released to surface water and provided an updated Safety Data Sheet. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's risk assessment for the chemical substance under the intended conditions of use, where worker exposure is expected be controlled through the use of appropriate PPE and release to water is not expected. P-16-0602	09/30/2016	Recommended section 5(e) Consent Order - Insufficient information available to permit a reasoned evaluation of the health effects	11/21/2016	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination* *In EPA's original screening analysis for this PMN in 2016, EPA identified potential for risk for lung effects, which resulted in the interim finding. The PMN submitter provided additional information on the intended use, which indicated inhalation exposure to workers is not expected. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's risk assessment for the chemical substance under the intended conditions of use described in the PMN where inhalation exposure is not expected. View the determination document.	04/10/2019

P-16-0581	09/19/2016	Recommended section 5(e) Consent Order - Insufficient information available to permit a reasoned evaluation of the health effects and exposure-based	11/07/2016	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination* *In EPA's original screening analysis for this PMN in 2016, EPA identified potential for risk for inhalation of respirable particles, which resulted in the interim finding. Based on an amendment to the PMN indicating that respirable particles are not expected under the intended conditions of use, EPA revised its assessment for the intended conditions of use. EPA's final determination that the chemical substance is not likely to present unreasonable risk is based on EPA's risk assessment for the chemical substance under intended conditions of use in the PMN and EPA's issuance of a proposed SNUR to address certain reasonably foreseen uses. Conditions of use that fall under the restrictions of the proposed SNUR are not likely to present unreasonable risk of injury to health or the environment because (1) those conditions of use are not likely to be commenced during the pendency of proposed SNUR and (2) upon finalization of the SNUR those conditions of use would be prohibited unless and until EPA makes an affirmative determination that the significant new use is not likely to present an unreasonable risk or takes appropriate action under section 5(e) or 5(f). View the determination document and the terms of the SNUR .	10/09/2018	06/04/2019

P-16-0538	08/26/2016	Recommended section 5(e) Consent Order - Insufficient information available to permit a reasoned evaluation of the health effects and may present an unreasonable risk of injury to the environment	10/31/2016	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination* *In EPA's original screening analysis for this PMN in 2016, EPA determined there was insufficient information to evaluate effects for human health concerns for lung surfactancy and may present a risk for intended and foreseeable uses based on ecotoxicity concerns, which resulted in the interim finding. Based on additional information provided by the submitter, EPA revised its assessment for the intended conditions of use. The submitter provided toxicity data on the new chemical substance and clarification on their processes that lead to a revised risk assessment. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's revised risk assessment for the chemical substance under the intended conditions of use, where EPA expects that employers will require and workers will use appropriate personal protective equipment in a manner adequate to protect them, and EPA's issuance of a proposed SNUR to address certain reasonably foreseen uses. Conditions of use that fall under the restrictions of the proposed SNUR are not likely to present unreasonable risk of injury to health or the environment because (1) those conditions of use are not likely to be commenced during the pendency of the proposed SNUR and (2) upon finalization of the SNUR those conditions of use would be prohibited unless and until EPA makes an affirmative determination that the significant new use is not likely to present an unreasonable risk or takes appropriate action under section 5(e) or 5(f). P-16-0512	08/08/2016	Recommended section 5(e) Consent Order - Insufficient information available to permit a reasoned evaluation of the health effects and exposure-based	10/27/2016	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination* *. In EPA's original screening analysis for this PMN in 2016, EPA identified that information was insufficient to evaluate human health risks, and identified exposure-based concerns, which resulted in the interim finding. EPA subsequently determined that there are no reasonably foreseen conditions of use for the new chemical substance and the PMN submitter provided clarifying information that changed the human health hazard profile. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's revised hazard and risk assessment for the chemical substance under the intended conditions of use, where EPA expects that employers will require and workers will use appropriate personal protective equipment in a manner adequate to protect them, and no unreasonable risk to the environment was identified. P-16-0510	08/05/2016	Recommended section 5(e) Consent Order - Insufficient information available to permit a reasoned evaluation of the health effects	10/24/2016	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination* *In 2016, EPA's original screening analysis for this PMN resulted in the interim finding listed to the Interim Status column. In response to EPA's recommendation, the submitter requested EPA perform an assessment using read-across for a particular analogue (an acrylamide). In considering the submitter's request, EPA identified additional analogues which it deemed more predictive (acrylates) than the submitter's suggested analogue for conducting a reasoned evaluation for the PMN substance. EPA conducted risk evaluation with both analogues and based on the analogue EPA deemed most predictive concluded the PMN substance was not likely to present	07/30/2018	

				unreasonable risk. Additional details regarding the analogues and risk evaluation are provided in the Determination document .

P-16-0422	06/22/2016	Recommended section 5(e) Consent Order - Insufficient information available to permit a reasoned evaluation of the health effects and may present an unreasonable risk of injury to the environment and exposure-based	08/25/2016	<p>"Not likely to present an unreasonable risk" section 5(a)(3)(C) determination</p> <p>*In EPA's original screening analysis for this PMN in 2016, EPA identified potential human health risk to workers and chronic risk to the environment, which resulted in the interim finding. The submitter provided new information including a proposed new analogue to be used in the human health and environmental assessment, new process information including waste water treatment efficiency, and new information on releases. EPA's final determination that the new chemical is not likely to present unreasonable risk is based on EPA's risk assessment for the chemical substance under the intended conditions of use described in the amended PMN, where worker exposure is expected to be controlled through the use of appropriate PPE, where submitter controls will keep water releases below the concentration of concern, and EPA's issuance of a proposed SNUR to address certain reasonably foreseen uses. Conditions of use that fall under the restrictions of the proposed SNUR are not likely to present unreasonable risk of injury to health or the environment because (1) those conditions of use are not likely to be commenced during the pendency of the proposed SNUR and (2) upon finalization of the SNUR those conditions of use would be prohibited unless and until EPA makes an affirmative determination that the significant new use is not likely to present an unreasonable risk or takes appropriate action under section 5(e) or 5(f). P-16-0417	06/22/2016	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health and to the environment and exposure-based	08/23/2016	<p>"Not likely to present an unreasonable risk" section 5(a)(3)(C) determination.</p> <p>*In EPA's original screening analysis for this PMN in 2016, EPA identified concern for risks to human health and the environment under the reasonably foreseen conditions of use, which resulted in the interim finding. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's risk assessment for the chemical substance under the intended conditions of use, where EPA expects that employers will require and workers will use appropriate personal protective equipment in a manner adequate to protect them, and EPA's issuance of a proposed SNUR to address certain reasonably foreseen uses. Conditions of use that fall under the restrictions of the proposed SNUR are not likely to present unreasonable risk of injury to health or the environment because (1) those conditions of use are not likely to be commenced during the pendency of the proposed SNUR and (2) upon finalization of the SNUR those conditions of use would be prohibited unless and until EPA makes an affirmative determination that the significant new use is not likely to present an unreasonable risk or takes appropriate action under section 5(e) or 5(f). Based on an amendment to the PMNs addressing water releases under the intended conditions of use, EPA revised its assessment for the intended conditions of use. EPA's final determination that the chemical substance is not likely to present unreasonable risk is based on EPA's risk assessment for the chemical substances under intended conditions of use described in the PMN and EPA's issuance of a proposed SNUR that addresses certain reasonably foreseen uses. Conditions of use that fall under the restrictions of the proposed SNUR are not likely to present unreasonable risk of injury to health or the environment because (1) those conditions of use are not likely to be commenced during the pendency of proposed SNUR and (2) upon finalization of the SNUR those conditions of use would be prohibited unless and until EPA makes an affirmative determination that the significant new use is not likely to present an unreasonable risk or takes appropriate action under section 5(e) or 5(f). View the determination document and the terms of the SNUR.</p>	10/09/2018	03/09/2020

The PMN submitter amended the PMN and provided additional information on releases, processing, and use. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's revised risk assessment for the chemical substance under the intended conditions of use described in the amended PMN and EPA's issuance of a proposed SNUR to address certain reasonably foreseen uses. P-14-0482	06/22/2016	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health and to the environment	05/05/2014	<p>"Not likely to present an unreasonable risk" section 5(a)(3)(C) determination</p> <p>*In EPA's original screening analysis for this PMN in 2014, EPA identified potential human health risk to workers, substantial releases, and risk to the environment, which resulted in the interim finding. The submitter amended the PMN, revising the production volume and intended conditions of use. EPA's final determination that the new chemical is not likely to present unreasonable risk is based on EPA's risk assessment for the chemical substance under the intended conditions of use described in the amended PMN where worker exposure is expected to be controlled through the use of appropriate PPE, expected releases to the environment are lower than originally estimated, and EPA's issuance of a proposed SNUR to address certain reasonably foreseen uses. Conditions of use that fall under the restrictions of the proposed SNUR are not likely to present unreasonable risk of injury to health or the environment because (1) those conditions of use are not likely to be commenced during the pendency of the proposed SNUR and (2) upon finalization of the SNUR those conditions of use would be prohibited unless and until EPA makes an affirmative determination that the significant new use is not likely to present an unreasonable risk or takes appropriate action under section 5(e) or 5(f). View the determination document and the terms of the SNUR.</p>	04/15/2019	07/06/2021

		risk of injury to the environment and exposure-based		*In EPA's original screening analysis for this PMN, EPA identified environmental risk and exposure-based concerns, which resulted in the interim finding. EPA subsequently updated the risk assessment to reflect current science and policy. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's revised hazard and risk assessment for the chemical substance under the intended conditions of use, where EPA expects that employers will require and workers will use appropriate personal protective equipment in a manner adequate to protect them, and no unreasonable risk to the environment was identified. View the determination document.		
P-10-0017	06/22/2016	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health and to the environment	11/16/2009	Withdrawal	09/21/2017

P-17-0324	06/16/2017	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health	07/13/2017	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination.* *In EPA's original screening analysis for this PMN in 2017, EPA identified potential risks to workers, which resulted in the interim finding. Based on additional information provided by the submitter, EPA revised its assessment for the intended conditions of use. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's revised risk assessment for the new chemical substance under the intended conditions of use, where EPA expects that employers will require and workers will use appropriate personal protective equipment in a manner adequate to protect them, and EPA's issuance of a proposed SNUR to address certain reasonably foreseen uses. Conditions of use that fall under the restrictions of the proposed SNUR are not likely to present unreasonable risk of injury to health or the environment because (1) those conditions of use are not likely to be commenced during the pendency of the proposed SNUR and (2) upon finalization of the SNUR those conditions of use would be prohibited unless and until EPA makes an affirmative determination that the significant new use is not likely to present an unreasonable risk or takes appropriate action under section 5(e) or 5(f). View the determination document and the terms of the SNUR .	05/15/2020	07/06/2021

P-17-0352	07/06/2017	Recommended section 5(e) Consent Order - Insufficient information available to permit a reasoned evaluation of the health effects and may present an unreasonable risk of injury to the environment	07/31/2017	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination. *In EPA's original screening analysis for this PMN in 2017, EPA identified potential risks to workers, which resulted in the interim finding. Based on additional information provided by the submitter, EPA revised its assessment for the intended conditions of use. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's revised risk assessment for the chemical substance under the intended conditions of use, where EPA expects that employers will require and workers will use appropriate personal protective equipment in a manner adequate to protect them, and EPA's issuance of a proposed SNUR to address certain reasonably foreseen uses. Conditions of use that fall under the restrictions of the proposed SNUR are not likely to present unreasonable risk of injury to health or the environment because (1) those conditions of use are not likely to be commenced during the pendency of the proposed SNUR and (2) upon finalization of the SNUR those conditions of use would be prohibited unless and until EPA makes an affirmative determination that the significant new use is not likely to present an unreasonable risk or takes appropriate action under section 5(e) or 5(f). P-17-0346	07/10/2017	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health and to the environment	08/03/2017	"Not likely to present an unreasonable risk" section 5(a)(3)(C) determination. *In EPA's original screening analysis for this PMN in 2017, EPA identified potential risks to the environment, workers, and the general population, which resulted in the interim finding. Based on amendments provided by the submitter that include measures to reduce worker inhalation exposure to the new chemical substance and clarifying releases to water, EPA revised its assessment for the intended conditions of use. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's revised risk assessment for the chemical substance under the intended conditions of use, where EPA expects that employers will require and workers will use appropriate personal protective equipment in a manner adequate to protect them, and EPA's issuance of a proposed SNUR to address certain reasonably foreseen uses. Conditions of use that fall under the restrictions of the proposed SNUR are not likely to present unreasonable risk of injury to health or the environment because (1) those conditions of use are not likely to be commenced during the pendency of the proposed SNUR and (2) upon finalization of the SNUR those conditions of use would be prohibited unless and until EPA makes an affirmative determination that the significant new use is not likely to present an unreasonable risk or takes appropriate action under section 5(e) or 5(f).
